

Rithvik Nakirikanti

✉ rithvik@rntech.org  [linkedin.com/in/rithvik-nakirikanti](https://www.linkedin.com/in/rithvik-nakirikanti)  github.com/rithvik213  rntech.org

Technical Skills

Languages: Java, Python, Go, JavaScript/TypeScript, SQL, Bash, Kotlin

Backend & Data: Spring Boot, Spring Cloud, Spring Batch, Dropwizard, RESTful APIs, Microservices, Kafka, Event-Driven Architecture, PostgreSQL, Redis

Frontend & Testing: React, TypeScript, Vite, React Router, TanStack Query, Tailwind CSS, Vitest, React Testing Library, Playwright, JUnit, Testcontainers

Infrastructure: Docker, Kubernetes, Helm, OpenShift, Terraform, Argo CD, Jenkins, CI/CD, Agile/Scrum

Interests: Backend Engineering, Full-Stack Development, Distributed Systems, Cloud Infrastructure, Developer Tooling

Experience

Oracle Cloud Infrastructure | *Java, Dropwizard, OpenAPI, Kubernetes, Terraform*

Seattle, WA

Software Engineer 2

Jul 2025 – Present

- Launched PDB management features (create, rename) for Oracle Database@Google using **Java**, **Dropwizard**, and **OpenAPI** specs, introducing net-new capabilities to 500+ customers and reducing support tickets by 35%.
- Designed an AI on-call agent using **Codex** and **MCP** servers to pull ticket context, service logs, and **Grafana** health dashboards, generating incident recaps and severity assessments across 90+ weekly Sev2 tickets.
- Accelerated new region time-to-market for Oracle Database@Google by 75% (2 weeks → 3-4 days) by devising an automated infrastructure pipeline using **Terraform** to orchestrate **Kubernetes** cluster provisioning and control plane deployment, expanding availability across 8+ new regions for GCP customers.
- Designed and implemented scoped Resource Principal Session Tokens for the Oracle Database@Google control plane, enforcing least privilege via **JWT** claims and eliminating excessive access across 50+ customer database operations.

Verizon | *Java, Spring Boot, Spring Batch, Docker, Helm, Kubernetes, OpenShift, Jenkins, Argo CD*

Basking Ridge, NJ

Software Engineer Intern

Jun 2024 – Aug 2024

- Built a **Java Spring Boot** KPI ingestion microservice using **Spring Batch** to normalize 1,000+ network metrics from raw Verizon data sources into a canonical schema for downstream consumption.
- Designed **RESTful APIs** in **Spring Boot** to expose normalized KPI data to downstream dashboards, handling 500+ requests/minute at peak across 10+ internal teams with sub-200ms p95 latency.
- Optimized **Spring Batch** throughput via chunk-oriented processing and parallel step execution, reducing end-to-end data processing time by 5x and enabling same-day KPI refresh cycles.

Software Engineer Intern

Jun 2023 – Aug 2023

- Containerized PlatformZero services with **Docker/Helm** for **Kubernetes** deployment, then migrated releases from **Jenkins** to **Argo CD** under a **GitOps** model, eliminating configuration drift and improving deployment cadence by 50%.
- Wrote **JUnit** and integration test suites achieving 85%+ code coverage across PlatformZero APIs, catching regressions pre-merge and reducing post-deployment hotfixes by 30%.

Avis Budget Group | *Kotlin, Android, Python, Tableau*

Parsippany, NJ

Software Engineer Intern

Jun 2022 – Aug 2022

- Developed an internal **Android** environment-switching tool in **Kotlin** that automated environment-specific configuration updates for 15+ QA engineers, eliminating manual setup steps and reducing testing overhead by 25%.

Projects

LedgerLite: Full-Stack Ledger | *Java, Spring Boot, Kafka, React, TypeScript, PostgreSQL*

Spring 2026

- Architected a 7-service **Spring Boot** backend (auth, account, transaction, analytics) behind a Spring Cloud Gateway with **JWT** validation and per-route rate limiting, using Eureka discovery, Spring Cloud Config, and event-driven flows over Redpanda (**Kafka** API) feeding the analytics read model.
- Built a **React 18 + TypeScript** SPA on Vite with React Router, TanStack Query, Zustand, React Hook Form + Zod validation, Tailwind/Radix components, and Recharts dashboards over the analytics API.
- Hardened the platform with **Resilience4j** circuit breakers, Micrometer → Zipkin tracing, and Prometheus/Grafana metrics; covered both layers with **JUnit**/Testcontainers integration tests and Vitest + **Playwright** unit/E2E tests.

Education

Boston University

Boston, MA

Masters of Science in Computer Science & Bachelor of Arts in Computer Science

May 2025

- GPA:** 3.80/4.00 (MS), 3.76/4.00 (BA)
- Relevant Coursework:** Distributed Systems, Database Systems, Machine Learning, Computer Networks, Cloud Computing, Operating Systems
- Leadership:** Teaching Assistant (Database Systems), Course Assistant (Comp. Systems)
